

AMENDMENT(S) TO THE SPECIFICATION

Please replace the specification with the substitute specification enclosed herewith.

Please amend the Abstract as follows:

The present invention relates to a vertical axis windmill and a wind power generation system, and especially to a A vertical axis windmill in which a support frame is provided as a wind power dam to form a plurality of shaft-installation sections, and in which a plurality of vertically long blades each of which has a tilted part at the upper and lower ends respectively being are disposed in multi-levels to improve wind-receiving power thereby providing a wind power generator with low installation cost and increased total power generation per a certain area.
